

### Individualize Notes

- The key concept to **individualize notes** lies in the differences between **functionality** of each note and follow by their **layout format**
- Different types of note in the system serves different purposes and its important to get it clear what their purposes are

### Define Functionality of Each Note

- Currently there are 4 types of note in the system
  1. **Doc notes** : Contain documents and export
  2. **List notes** : Contain reusable notes or items
  3. **Task notes** : Scheduling and planning tasks or events
  4. **Log notes** : Log **DONE=/=ABRT** tasks

### Separating notes

The purpose of separating big notes into smaller notes is to create a *cleaner documentation, better organized and structured information; easier to share*

- The **targets** of each notes have to be specifically formatted
- Customized unique **templates** for each notes
- Harder to maintenance

### Milestone Note

A project milestone is like a **checkpoint** on the road to completing a larger project. It breaks down a project into more manageable phases, helping you stay on track by highlighting key moments in the project's timeline

Milestone in project management give a broad view of progress and are made up of smaller specific actions like deadlines or individual tasks. Millstones serve as markers that signify when you've hit an important phase or achieved a major outcome, moving you close to the overall goal

Project milestones vary depending on the type of project, but they all serve the same purpose: 1. To track progress at key stages. 2. Ensure everything stays on course
